Introduction

Enterprises across asset-intensive industries like Manufacturing, Energy etc. are under increasing pressure to improve Customer Service, Asset uptime and Build predictability driven by the data. Patterns7 solution for enterprise asset operations management helps enterprises to remotely monitor asset condition, build preventive maintenance strategies and provide customer service.

We help enterprises to stay ahead of the curve.

1 Connected asset
Real-time monitor asset condition with help of connected assets. Edge processing with IoT data logger.

2 Incident Management
Faults / Alerts reported in realtime as an incident. Customer can also report complaints on chatbot.

3 Site Servicing
Preventive maintenance & site servicing with the Mobile first approach. Schedule work orders & empower technician.

Improve Customer Service, Asset uptime and Build predictability with connected assets operations.
